The Building of Cambridge	2482
The Building of Rome	2420
Haman by the command of K. Ahas. hanged	2119
Alexander the Great died	1591
Julius Cesar slain with Bodkins or Steeletto's	1711
Jesus Christ the Saviour of Mankinde born	1668
The death of S. Peter and Paul at Rome	1594
Titus Vespasian took Jerusalem	1595
Christianity first Received in England	1478
England first made a Kingdom	863
Duke William Conquered England	602
The first Lord Major of London	538
Printing first brought into England	218
Luther opposed the Pope	150
Pope Gregory reformed the Calendar	86
The new Exchange Builded	55
London Bridge fired	36
Long Parliament began	28
Archbishop Laud beheaded	24
King CHARLES the first murdered	20
Long Parliament Pul'd out of doors by O. C.	15
King CHARLES the 2d returned to England	8
The Apparition of three Comets	3
The great Plague whereof died 100000	3
The great Fights with the Dutch	3
London almost all Burned	2

An

An Explanation of the following Calendar.

THe Calender consists of two pages, a right hand and a left. In the left hand page, you will finde 7 Columns; the first of which contains the days of the moneth.

The second holds the days of the week, described by the 7 Hebdomaick letters E, being the Dominical, or Sunday letter, until S^t Matthias, and after that time, D.

The third exhibits to your view, the several Festivals both Moveable and Fixed, and other Saints days, not observed by us, but by the Church of Rome.

The fourth shews the Signe, or the Moon, as she passeth through the 12 signs, governing the 12 parts of mans body.

The fifth contains the Age of the Moon.

The sixth declares the time of High water at London bridge, which never fails, unless high Winds and land flouds beget an alteration, which cannot be much at any time.

The seventh shews the variation of the air, and the mutual Syzygies, or Aspects of the Planets, which cause the air to alter.

Over the head of this left hand page are the times of the New and Full, First and last Quarters of the Moon.

In the right hand page, you have but three Columns; the first whereof holds the days of the moneth; the second the Days of the week. And the third, which is a large Column, holds some particular observations, with a considerable vacancy, for persons to write down their own particular matters or busnesses for the ease of their own memories, as they shall see cause, against every particular day that such matters shall happen on. And thus you have the Calender explained.

Over the moneth of the right hand page, thou wilt finde an Explanation of many of our Christian Festivals.

January hath xxxi days.

New moon the 3 day at 8 in the evening.
Fir. quarter the 10 day, about mid night.
Full moon, the 19 day, at 4 in the morning.
Last quarter, the 26 day, at 2 after noon.

January 1668.

On New-years-day we celebrate the Feast of the Circumcision of our Saviour Jesus Christ; who for the good of Mankinde became obedient to the Law. And on that day also, in imitation of the Gentiles, we still preserve the laudable custome of sending and receiving New years gifts; that by such a correspondency Love and Amity may be the better continued among men.

May 1668.

On the first day of this moneth is celebrated the Feast of S. *Philip* and *S. James*. There were two *Philip's*: but this was *Philip* the Apostle, who preached the Gospel in *Scythia*, &c. and wrought many miracles: yet is crucified by the Jews *Anno* 54. *S. James* was Author of the Epistle in the New Testament, which goeth under his name. He was the first Bishop of *Jerusalem*: yet the Jews stone him.

August 1668.

The Feast of S. *Bartholomew* is kept on the 24 of this moneth; he was by birth a *Syrian*, and Nephew to the then King of *Syria*. He preached the Gospel to the *Lycaonians*, and to the famoused *Indians*, and lastly to the *Armenians*; where by *Astyages* their King (on this day) he was first Stoned, and then Excoriated, or Flayed alive. *Anno* 51.

The Table of Dignities explained.

THe foregoing Table consists of twelve Columns, or spaces, the first of which contains the signs of the Zodiack; the second, the houses of the Planets, both Diurnal and Nocturnal; the third, their Exaltations; the fourth, their Triplicities both by Day and Night; the next five, exhibit the Terms or boundaries of the Planets; and the three last, the Decanates or Faces of the Planets, according to their titles. The use whereof is thus.

First, you must note, that every Planet hath two signs of the Zodiack for their houses, except the Sun and Moon, and they have but one a piece; and therein they have the greatest force, as enjoying (by the consent of all Astrologers) five dignities therein. As ♂ in ♈, or ♀ in ♉. The next dignity, is their Exaltation: and that is confined to a certain part or portion of a signe, and not to the whole signe, as the houses; and when any Planet is so placed, he enjoys four testimonies of fortitude: as ☉ in 19. ♈. or ☾ in 3. ♉. The third fortitude they possess, is a triplicity, and this is both Diurnal and Nocturnal: and when any Planet enjoys such a dignity, he hath three Arguments of strength allowed him; as ☉ and ♃ in ♈. or ♀ and ☾ in ♉. ♄ and ☿ in ♊. The fourth fortitude they possess, is that of a Term; and therein they enjoy two dignities; as ♃ in the first six degrees of ♈, &c. The first is that of a Face, or Decanate; and therein they receive 1. Argument of strength; as ♂ in the first 10d. of ♈, &c. All which the Table it self expresseth most plainly.

A Table of Terms this year 1668.

Returns, or Essoyn Days.	Days of Exception.	Returna Brevium.	Days of Appear.
Hilary Term begins January 23. Ends February 12.			
Octab. Hil. Jan. 21	Jan. 22	Jan. 22	Jan. 23

Quind. Trin. June 1	June 2	June 3	June 4
Tres Trin. June 8	June 9	June 9	June 10
Michaelmas Term begins Octob. 23. Ends Novemb. 28.			
Tres Mich. Octob. 21	Octob. 22	Octob. 22	Octob. 23
Mens. Mich. Octob. 29	Octob. 29	Octob. 30	Octob. 31
Craft. Anim. Novemb. 3	Nov. 4	Nov. 5	Nov. 6
Craft Mart. Novemb. 12	Nov. 13	Nov. 13	Nov. 14
Octab. Mart. Nov. 19	Nov. 19	Nov. 20	Nov. 21
Quind. Mart. Nov. 26	Nov. 26	Nov. 27	Nov. 28

Note, that the Exchequer openeth 8 days before any Term begins, except *Trinity* Term, and then it openeth but 4 days before.

Note also, that the first and last days of every Term, are the first and last days of Appearance.

The Vulgar Notes in both Accounts this year 1668.

Engl. Account.		*Rom. Account.*
16	Golden Number	16
25	Cycle of the Sun	25
E D.	Dominical Letters	A G.
6	Roman Indiction	6
26	Epact.	16
1	Number of Direction	4
January 19	*Septuagesima*	January 29
February 5	*Dies Cinerum*	February 15
March 22	Easter Day	April 1
April 26	Rogation Sunday	May 6
April 30	Ascension Day	May 10
May 10	Whitesunday	May 20
Novemb. 29	Advent Sunday	December 1

Note, That the Roman Account is always 10 days before the English Account; and the eleventh day of the moneth with them, is the first day of the moneth with us: And the last day of the moneth with us, is the tenth day of the moneth with them.

Note also,

That the Holy Feast of Easter falls the lowest this year, that possibly it can fall; it hapning upon the day of its neerest Limit, *viz.* on *March* the 22. It hath not done so in many years before, nor will it fall out so again, in the compass of many more.

Of the Eclipses this year 1668.

THe two Celestial Luminaries will in this year be twice obscured from our sight, either partially, or platickly: whereof the first of the Moon, and the last of the Sun, will be onely visible in our English Hemisphere. I shall mention them in the order they happen.

The first Eclipse will be of the Sun, and invisible as to us, it happning on *April* the 20 day, near our midnight, *viz.* at 11 h. 32 m. P. M. This will be a great Eclipse, and to be seen of such as inhabit the remotest Southern parts of the earth. It happens 21 degrees of Taurus, near the Longitudinary place of that violent fiery Star, called *Caput Algol*, or *Medusæ*, and adviseth all such, that have that part of the Zodiack either culminating, Horoscopating, or the places of their Sun, Moon, or part of Fortune, unto great caution in all their Affairs, of what kinde soever they shall be.

The second Eclipse will be of the Moon, and will happen on *May* the 16 being Saturday, between 3 and 4 a clock in the morning; it will be almost a total Eclipse, there being 10 of 12 parts of the Moons whole body obscured. It is celebrated in the Celestial signe Sagittarius, in 6 degrees thereof, *viz.* near the Scorpions heart, a Kingly yet violent fixed Star, of the first magnitude, and near the Ecliptick. All Kingdoms Countreys, Cities and Towns, *&c.* that have either that point or its oppolite Ascending at their Radixes, or the places of their Luminaries, are concerned in the effects of this Eclipse. What those places are, See M. *Gadbury*, Doctrine of Nativities, *part.* 1. *Vol.* 12. *&* 16. It relates also to particular persons whose Genitures have a correspondency therewith. I pray God keep and preserve us

an eminent suffering City in Europe, from more than ordinary fears, and troubles.

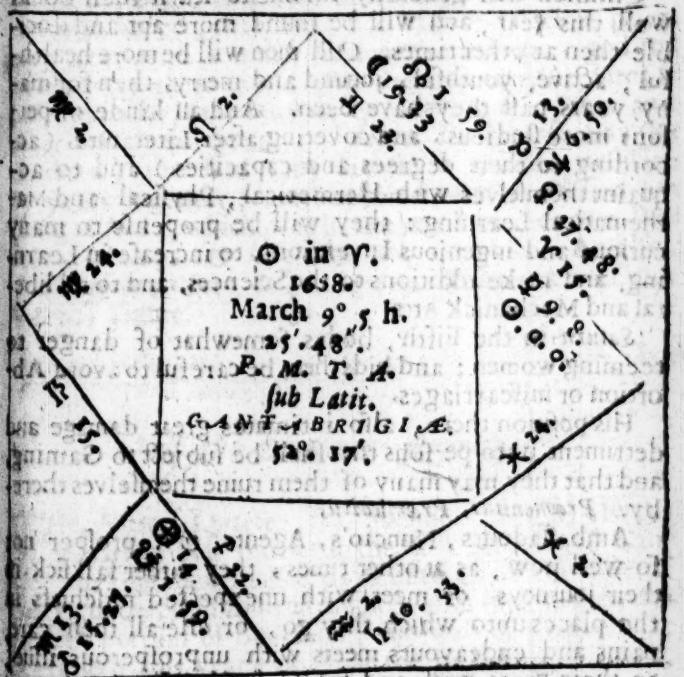
The third Eclipse will be of the Sun, and hapneth on *October* the 25 day about 2 a clock in the afternoon. It is celebrated in 13 degrees of Scorpio, and in the ninth house of the Heavens; but the great *Solar deliquium* which happened in June 1666. its effects being not determined, and this Eclipse happening in Trine unto that, what hath been said of that, in a book intituled *Vox Solis*, may rationally be understood of this, and therefore to that book do I refer my Reader for further satisfaction herein.

The last Eclipse this year, will be a very partial Eclipse of the Moon on *November* 8 in the afternoon, it happens in 17 degrees of Taurus, amongst the violent and tempestuous stars of the Pleiades; commonly called the Seven stars, or *Vergiliæ*. It is principally to be seen in the more Oriental parts of the World, as in *China*, *Tartaria*, and the *Indies* both within and without the river *Ganges*; *cum multis aliis*, as may be seen upon the Terrestrial Globe. *Proclus* saith, such an Eclipse signifies the destruction of Serpents, Locusts, &c. why not of men, of a serpentine and devouring nature? How happy would the world be were it but freed from such oppressive burdens! This much for Eclipses this year.

Of the Solar Ingresses 1668.

BY the Ephemerides of that industrious Ephemeredis Master *Kuncen Wing*, the Royal Lamp of Heaven, the Sun enters the first point of the Celestial signe *Aries* on *March* the ninth day, five hours, twenty four minutes, forty eight seconds, *Tempus Apparens P. M.* or in the Afternoon, in the Meridian of London, and the same

rary distance is but one minute of difference in time: but because the Latitude differs, the figure will a little differ too from that fitted to *London*, and it is thus.



In this *Figura mundi*, or Celestial Scheme of the Vernal Ingress, the 1st decanate of the Virgin Ascends on the Eastern Finitor, and Mercury Lord thereof, is in ♈ Aries, the great dignities of the Sun and Mars, there combust, and in Sextile Aspect of Saturn; occasioning (according to the Canons of Astrology) high and lofty Winds, and various Meteors in the air most of the Spring and Summer Quarters. But because I have largely discoursed,

recited of the Meteorological variations, in the Calendar before going: I shall pretermit all discourse thereof in this place, and come to other matters.

Children will generally incline to learn their books well this year, and will be found more apt and docible then at other times. Old men will be more healthful, active, youthful, jocund and merry, then for many years past they have been. And all kinde of persons more studious, and coveting after Literature, (according to their degrees and capacities) and to acquaint themselves with Hermetical, Physical and Mathematical Learning: they will be propense to many curious and ingenious Inventions, to increase in Learning, and make additions to the Sciences, and to all liberal and Mechanick Arts.

Saturn in the Fifth, bodes somewhat of danger to teeming women: and bids them be careful to avoid Abortion or miscarriages.

His position there, also intimates great damage and detriment unto persons that shall be subject to Gaming, and that they may many of them ruine themselves thereby. *Præmonitus, Præmunitus.*

Ambassadours, Nuncio's, Agents, &c. prosper not so well now, as at other times; they either fall sick in their journeys, or meet with unexpected mischiefs in the places unto which they go, or else all their care, pains and endeavours meets with unprosperous issue, to their great griefs and troubles of minde. *Haly*, and *Guido Bonatus* are my Authours in what hath been said; but I want room to cite their Original texts.

The Moon in the tenth house, the place of honour and dignity, the *Medium Cœli*, heart of heaven, &c. and on *Gemini*, the Horoscope of *London* posited; together with the North node of the Moon, his being located there, intimates great happiness and success to attend that Late suffering City. Her rebuilding may

go prosperously on; and her trading increase, and this much to the content and satisfaction of most of her Children and Inhabitants. Her Magistrates and Grandees begin to thrive better then formerly, and it is to be hoped, that, that but of late Glorious place may meet with a much suddener reparation, and restauration, then it did after the two terrible fires it suffered under, *in Anno* 798. *& Anno* 801. From and after which sad years (if *Simon Dunelmensis* may be credited) the said City lay in a manner desolate 85 years together; until restored, and re-edified by King *Alfred*: which was in the year 886. See *Sim. Dunelm. col.* 131. *& l.* 31. *& col.* 150. *l.* 5. As also, *& Bromptons Chron. col.* 812, 813. Thus much of the Vernal Figure.

Of the Summer Quarter.

The Æstival Quarter, or Summer, begins always when the Sun toucheth the first Scruple of Cancer; making then longest days unto us on this side of the Equator, and shortest nights; affording us then the greatest portion of Sun-shine, and least of shadow. It beginneth this year, on *June* the 10th day, 8 hours, 13 minutes P. M. or After noon, *viz.* just upon the setting of the Sun with us; the beginning of the Celestial and Tropical signe Capricorn just Ascending the Horo'cope.

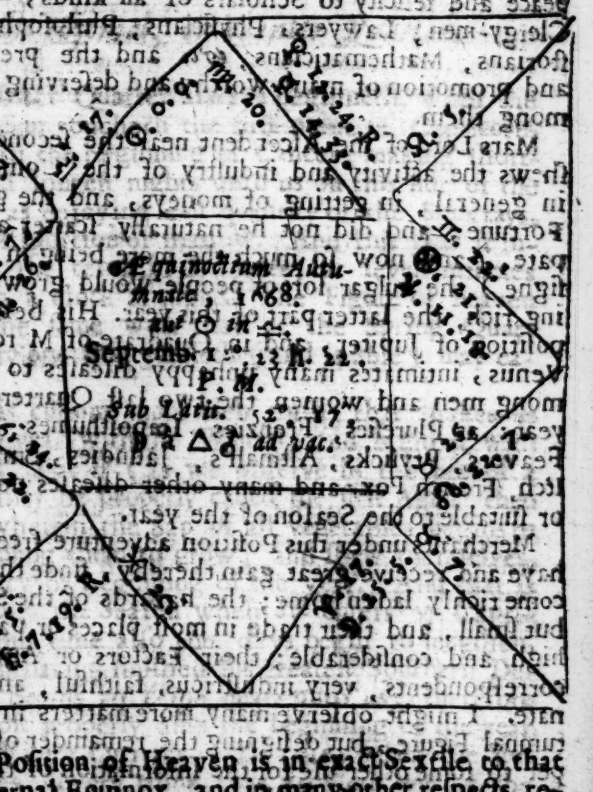
I shall not need to set a Celestial Scheme for this ingress, because a Bi-corporeal or double-bodyed signe ascended at the Vernal Equinox, which (according to *Guido* ought to continue in force until *Sol* enters into the Equinoctial signe Libra. His words are these, *Sed*

si fuerit Ascendens signum commune, non durabit illa revolutio, nisi usque ad introitum ☉ in ♎; tunc oportebit te reiterare Revolutionem, &c. If the signe ascending at the Vernal ingress shall be a double bodyed or Common signe, that shall not continue the whole Revolution, but until the Sun enters into Libra, and then thou art to set another Figure: which that I might not be thought to deviate from the Rules of Astrology, I shall observe at this time, and so conclude the Summer Season.

Of the Autumnal or Harvest Quarter.

Æquinoctium Autumnale, or the Autumnal Quarter, begins always when the Glorious Lamp of Heaven toucheth the first point of the Celestial Balance; making then the days and nights of Equal length the whole world over. And this year it happens on *September* the 22th day, 23 hours after noon, and 22 minutes over: Astronomically; but more vulgarly, and for more common understanding on *September* the 23d day, 22 minutes past 11 of the clock before noon. And the Figure of Heaven represents it self thus, in the Meridian of *Cambridge*.

This



This Position of Heaven is in exact Sextile to that of the Vernal Equinox, and in many other respects resembles the same in signification and portent.

The Lord of the tenth is the most potent Planet in the Figure, and in ☌ conjunction of Venus, Lady of the Seventh and Eleventh Angles, in the Ninth. Denoting the happy condition of Princes, Potentates, and Magistrates of all sorts; the loyalty and duty of subjects to their Soveraigns; a renewing of old friendships, and making of new Leagues; promiseth much

peace and felicity to Scholars of all kinds, whether Clergy-men, Lawyers, Physicians, Philosophers, Historians, Mathematicians, &c. and the preferment and promotion of many worthy and deserving men among them.

Mars Lord of the Ascendent near the second house, shews the activity and industry of the Commonalty in general, in getting of moneys, and the goods of Fortune; and did not he naturally scatter and dissipate, and now so much the more being in a Fiery signe, the vulgar sort of people would grow exceeding rich, the latter part of this year. His being in opposition of Jupiter, and in Quadrate of Mercury and Venus, intimates many unhappy diseases to reign among men and women the two last Quarters of the year; as Pluresies, Frenzies, Impostumes, Burning Feavors, Ptysicks, Altmah's, Jaundies, Small Pox, Itch, French Pox, and many other diseases not proper or suitable to the Season of the year.

Merchants under this Position adventure freely, and have and receive great gain thereby, finde their Ships come richly laden home; the hazards of the Sea seem but small, and their trade in most places or Parts, very high and considerable; their Factors or Agents, or correspondents, very industrious, faithful, and fortunate. I might observe many more matters in this Autumnal Figure, but designing the remainder of my Paper to some other use for the information of the sober Countrey-man, I shall at this present forbear, but onely name the other season.

Of the Hyemal, or Winter Quarter.

THe Winter Quarter always beginneth, when the Sun toucheth the first point of Capricorn, or the earth the beginning of Cancer; making shortest dayes and longest nights unto us on this side of the Equator, as enjoying least quantity of the Suns rays, and greatest portion of shadow. And this year it initiateth on the tenth of *December*, at seven minutes past eleven a clock at night. The Figure of heaven is nearly the same with that of the Spring Quarter, as any one that pleaseth (and is able) may easily see.

It is custom more then truth, that makes us to end the year with the Winter, and begin it with the Spring. For if (as we observe in the life of a man) Infancy be properly called the first Age, then that time wherein the Sap of all vegetables begins to expand, cauling them to grow, and shew themselves, is the Infancy or beginning of the year. And that is Winter, *viz.* the Season when *Sol* enters ♑ Capricorn. At this time also the days begin to lengthen, and the Sun having finished his greatest Southern Declination, begins to come near unto us; therefore may we most properly affix the beginning of the year upon the Winter Quarter. 'Tis true, when the Sun enters Aries, every thing that groweth out of the earth, begins to look fresh and glorious, alluring the eyes of all Creatures with their beauty and sweetness; howbeit, there is a Spring in *January* and *February*, and in the latter part of *December* also; though not so great as that in *March*: And the glory that *March* produceth, is rather to be assimulated to the flourishing Juvenile years of our youth, then unto our Non-age, or Infant years. *Ergo*, The Quarter

called

called the Spring is more properly to be called the Second Quarter, then the first; and the year rationally begins in *December*, when the Sun enters Capricorn.

Thus much of the several Seasons of the year, and their several significations.

Here follows some Phylical Observations.

I. *For, or concerning Bleeding.*

YOu must avoid bleeding when the weather is either excessive hot, or extreme cold, except necessity urge or require it. As in case of a Phrenzy, Apoplexy, Feaver, Pluresie, extreme Head-ach, or the like, then speedy blood-letting is an infallible cure; otherwise Death suddenly ensues. But if there be no cause for opening a vein, then observe the following rules.

Let Phlegmatick persons blood when the Moon is in Aries, or Sagitary, in no ill aspect of Saturn or Mars, still avoiding to bleed, in that member represented by the signe the Moon is in.

Let Cholerick persons bleed, when the Moon is in Cancer, Scorpio, or Pisces, in good Aspect of Jupiter or Venus.

Let melancholy people blood, when the Moon is in Libra, or Aquarius: and if they be ancient, let her be well beheld of the Sun, Jupiter, or Saturn.

Let Sanguine persons blood, when the Moon is in Gemini, Libra, Aquarius, or Pisces. Be careful in all that the Moon be in no ill Aspect of Mars: for a learned Doctor of Phylick was some six years since let blood, when

when the Moon was in ill Aspect of Mars in Gemini; and the Chirurgeon (though a skilful Artist, and otherwise not unfortunate) had the sad luck attending him, in that undertaking to strike a tendon, the Doctors arm Gangreen'd, and in short time kil'd him

2. *For Sweating.*

Sweating is twofold, The one Natural, the other Artificial: and hath a double use or end. The Natural Sweat, if the patient sweating be careful, will dissolve all grosse and thick humours; comfort the Spirits, and cleanse the blood; consumes raw humours, and banisheth cold: It qualifies raging Feavers, Madness, &c. and assists against Palsie, Gout, and Dropsie.

The Artificial Sweat helps deafness, or any diseases in the head and ears, cures the Stone, dissolves congealed humours, and ferments the blood, and cleanseth the body of Morphew, Scabs and Itch, French Pox, &c.

Let persons sweat two or three days after the New Moon, or at the Full; and when the Moon is in Aries, Leo, or Sagittary, and in good Aspect of the Sun, Jupiter, or Venus, and they strong.

You must note, that Sweating is to be performed in the evening, not in the morning; for in the cool of the day, the Spirits retire inward, and then sickly persons will be the less subject to faint: and when the body hath good store of nourishment within it, the heat is employed about the Concoction, and cannot therefore be attracted to the extreme parts so easily.

3. *For*

3. For Purging, Vomits, and Clysters, &c.

Let the Moon be posited in the signs of the watery triplicity, *viz.* in Cancer, Scorpio, or Pisces, when you give purgers: if you would purge with Potions, let her be in Scorpio onely.

If you would purge with Electuaries, let the Moon be in Cancer, if you would purge with Pills, place her in Pisces.

Take preparatives, as, Bolusses, or the like, when the Moon is in Gemini, Libra, or Aquarius.

Good to vomit, when the Moon is in Aries, Cancer, or its opposite signe Capricorn.

Good to take Clysters when the Moon is posited in Libra or Scorpio.

Good to stop Fluxes, Rheums and Lasks, when the Moon is in Taurus, Virgo, or Capricorn.

Good to use Kneesing, when the Moon is in Leo Libra or Cancer.

Good to strengthen the Attractive vertue, when the Moon is in Aries, Leo, or Sagittary.

Good to comfort the Vertue Digestive, when the Moon is in Gemini, Libra, or Aquarius.

Good to strengthen the Expulsive vertue, when the Moon is in Cancer, Scorpio, or Pisces.

Good to fortifie the Retentive vertue, when the Moon is in Taurus, Virgo, or Capricorn.

Good to bathe, when the Moon is in Cancer, Libra, Aquarius, or Pisces, and in aspect of Jupiter or Venus.

Cut hair when the Moon is in Libra, Sagittary, Aquarius or Pisces, increasing in light.

Medicina à Medico, Medela ab Altissimo.

Physick the Physician brings;
But Health comes from the King of kings.

Thus

This much for Physical Observations; which each person that shall make use of, may be Physician to himself, and preserve his body in health, and free from diseases.

Observations Agricultural, or belonging to Husbandry.

IF you would plant or graff trees for continuance, let it be done, when the Moon is in Taurus, Leo, or Aquarius: but not in Scorpio, though that be a fixed signe, because it is of the watery Trigon.

Plant or graff generally, when the Moon is increasing, in Taurus or Aquarius, and this either in the beginning of the Spring, or latter end of Harvest.

Cut Timber that it may keep, and continue sound, either in *December* or *January*, in the New of the Moon, and she being in Aquarius or Pisces.

Prune trees, and pull off the moss, or superfluous branches in *January*, or *February*, and this at the New of the Moon, that the sap may increase.

Plash hedges, and lop extravagant trees for fuel, that they may the more suddenly, and vigorously grow again, at the increase of the Moon, and when she is posited in Aries or Libra.

Remove young trees in the moneths of *September*, *November*, and *February*, and in the last Quarter of the Moon, and when she is placed in Aries, Libra, or Scorpio.

Set young Quicksets for hedges, or else, from the moneth of *September* unto *March*, and in the new of the Moon.

Set or plant Vines either in *February*, *March*, or *September*, and in the increase of the Moon, when she shall be in Aries, Libra, or Scorpio.

Set

Set Rose trees, Currents trees, *&c.* in the middle of *February*, at the increase of the Moon.

Cut or prune trees in the moneths of *March* and *April*, in the New of the Moon, she being placed in Taurus, Virgo, or Capricorn.

Mow, or cut down your Hay, presently after the Full Moon, and she in Gemini or Libra.

Gather Fruit, as Apples, Pears, Plums, and the like, at the Full of the Moon, in the Afternoon, when you finde the weather fair and dry.

Dung your ground to hearten it, and to prevent the growing of weeds, at the decrease of the Moon.

Sow Onyons, Leeks, Parsley, Spinage, Clary, Lettice, *&c.* in the increase of the Moon, either in *February* or *March*; they'l then prosper the better.

Sow Carrets, Sorrel, Fennil, Radishes, set Beans and Pease, about the end of *February*, or beginning of *March*, and at the increase of the Moon.

Sow Melons, or Cucumers in the moneths of *February*, *March*, *April* or *June*, the day being hot and fair.

Observe, that in sowing of Corn, or other seed, it is best of all to do it, when the Planet Saturn is neither Retrograde, Peregrine, or Combust, but rather when he is strong and powerful, and the Moon in good aspect with him, and free from the Rays of Mars. Thus much for Observations in Husbandry.

Neque is qui plantat, neque is qui rigat,
Sed Deus qui dat incrementum.

The use of the Table of Interest.

THis Table of Interest is very easily understood, even by any that can but read: and is to be known by inspection onely. In the first Column to the left hand are certain Sums of Tens, Hundreds, and Thousands of pounds. And in the other five Columns toward the right hand, are the several sums of money that are the proper Interest due unto each of those sums in the first Column, under

u der their respective quantities of time, as mentio
in the head of the Table over each particular Sum.

Example.

Admit it be desired to know, what the Interest
Fifty pound amounts unto in 9 moneths time. First
look 50 in the first Column under the title of Sums;
in the common *Area*, under the title of 9 moneths
finde 2 l. 5 s. 0 d. *viz.* two pounds, five shillings, and
much is the Interest of 50 l. for 9 moneths. Now if
guide your eye forward in the Common *Area*, un
12 moneths, you will finde 3 l. 0 s. 0 d. Which tells y
that in 12 moneths, or one years time, it comes to th
pounds just. *Et sic in aliis:* do so in all other Questio
and you cannot fail.
